Expressions In Github workflow

$${\{ \{ \ \underline{\quad} \ \} \}}$$

↑ expression

we can write an expression to evaluate Something.

$$\boxed{\text{github . token}} \ \checkmark$$

$${\{ \{ \ github.token \ \} \}}$$

operators *available* to be used in an expression

$\hookrightarrow$ == $\longrightarrow$ equals

$\hookrightarrow$!= $\longrightarrow$ not equals

$\hookrightarrow$ > $\longrightarrow$ less than

and

$\hookrightarrow$ < $\longrightarrow$ greater than

&& $\rightarrow$ logical and

or
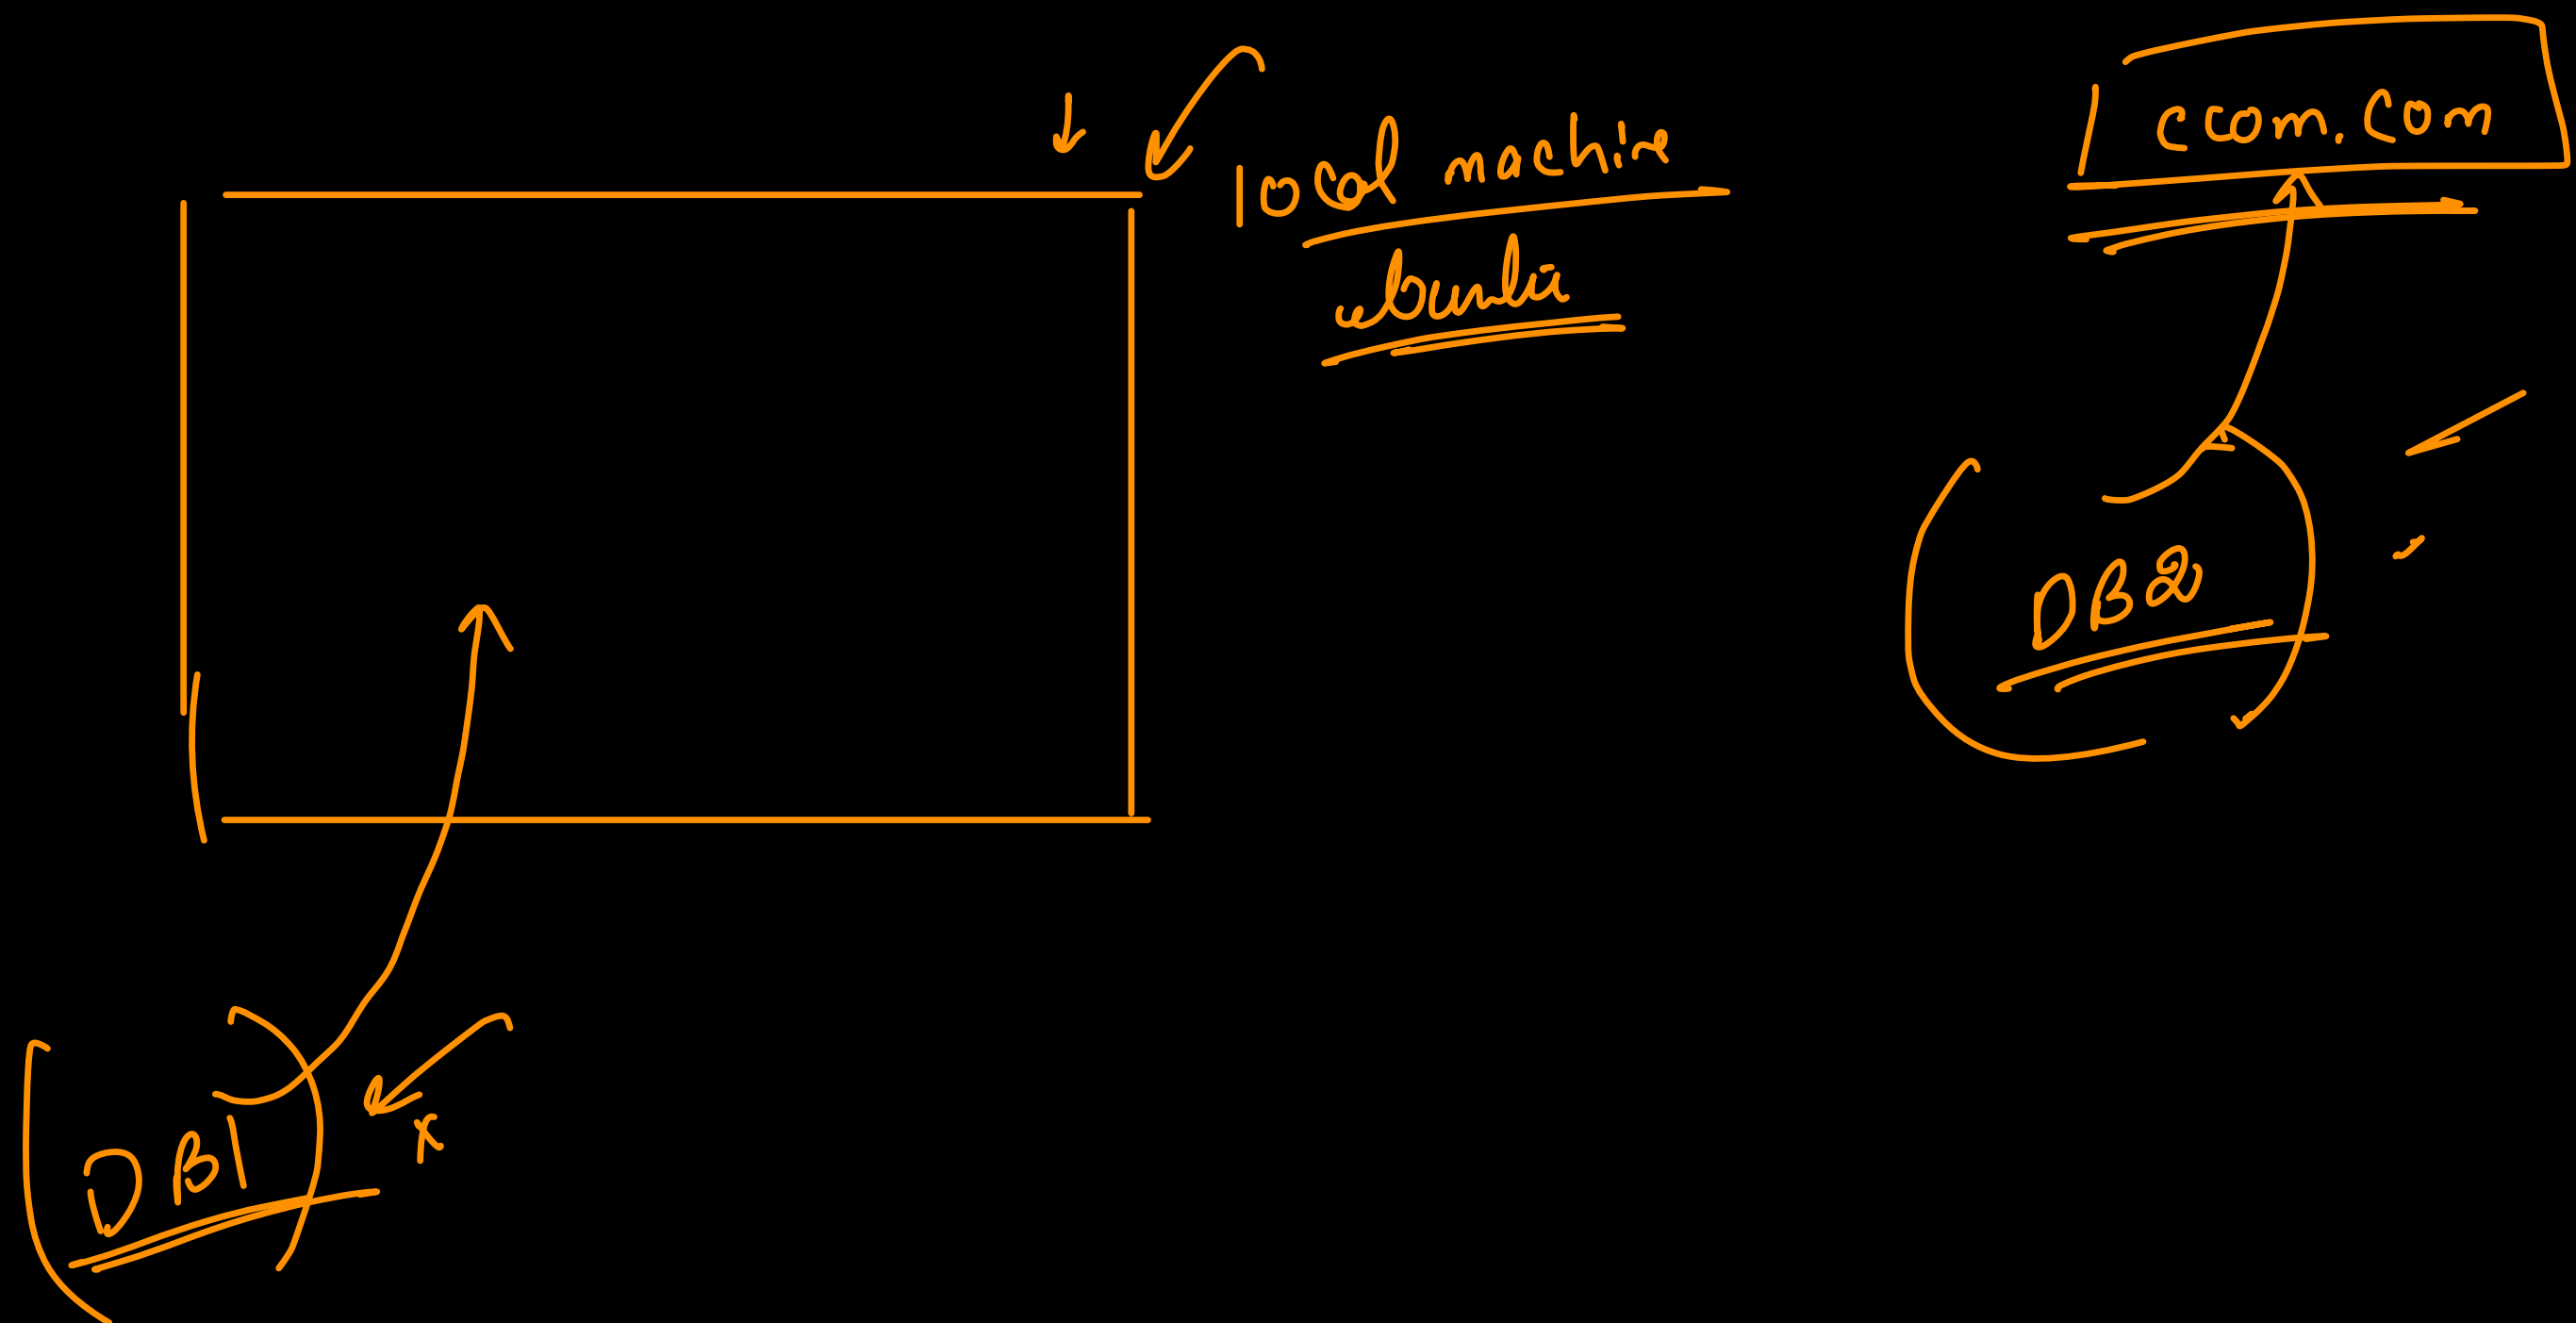

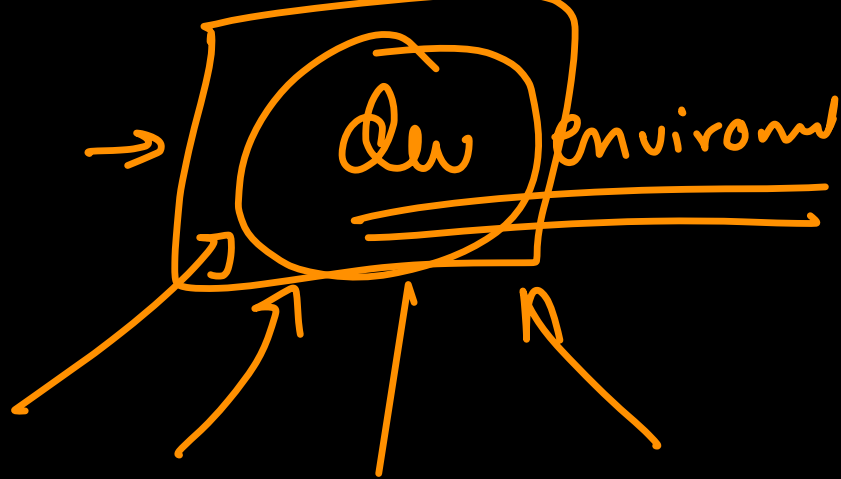

|| $\rightarrow$ logical or.

and more...

Environment

→ environment is a setup where we develop, test and deploy our applications

Generally we keep separate environment to do everything.

How two environments can be diff ??

local machine
ubuntu

ccom.com

DB2

DB1   x

To develop a feature on your local machine → [Dev] environment

We will setup another env for testing → test/QA env

→ preprod

→ (prod)
